ChatGPT Consumes 500ml Of Water To Answer 20 Question

Posted by u/matthew199222 • • 0 points • 0 comments

One of the study's most startling revelations is that Microsoft, in partnership with OpenAI, consumed a staggering 185,000 gallons of water solely for training GPT-3. This is equivalent to the water required to cool a nuclear reactor, or the amount needed to produce 370 BMW cars and 320 Tesla electric vehicles. The research also highlights that if Microsoft had trained GPT-3 in its larger Asian data centers, the water consumption would have tripled.
