

# ChatGPT uses water to cool down its servers. is the water recyclable

Posted by u/Akshat\_Pandya • 0 points • 12 comments

I was reading that GPT servers or the GPU need cooling down. Was wondering if they can recycle or reuse the water that they use once or does it get evaporated or what? It's like one conversation with ChatGPT with 25 messages consumes 500 ml of water. That's crazyy mannn!!!

## Comments

Someone just told me this and I see absolutely no reason why it wouldn't be closed loop, doesn't even have to leave the clean water system just run a pipe from clean to clean and wind it around the servers....

u/SpeakingFaithfully • 1 points • 2023-06-21 20:01 UTC

All water is recyclable

u/QuasiRandomName • 5 points • 2023-06-21 19:57 UTC

This water evaporates and goes into the atmosphere and will eventually come back as a rain. So it is recycled naturally.

u/C-BrownWakesFromBed • 2 points • 2023-06-22 05:56 UTC

I feel like people dont understand this and think the water disappears.

u/Inostranez • 1 points • 2023-06-21 18:30 UTC

> like one conversation with ChatGPT with 25 messages consumes 500 ml of water.

It is on its side. You forgot about the 500 ml of beer you consume

u/vancouvercyclist • 1 points • 2023-06-21 14:49 UTC

Probably closed loop I hope

u/UnusualChance5578 • 1 points • 2023-06-21 09:07 UTC

Some desktop computers have water cooling. Mine does. It's a closed loop that pumps it to the CPU, where it takes on heat, then to a fan/heat sink at the back, where it loses the heat again. The water just goes round in a circle, removing heat from the processor and dumping it out the back of the computer into the room.

u/Hibbiee • 2 points • 2023-06-21 11:05 UTC

But that's when you can't dump the water...

Power plants will often just pull water from a river and dump it back in the river

ChatGPT servers just let water evaporate on their heatsinks. Once you can have your processors work at boiling temperatures this is just easier

u/viktor138 • 4 points • 2023-06-21 05:50 UTC

They are not recycled, it is cheaper to just pay for more water. If you live near any data centers you can see the large vapor stacks above them on any cold winter morning.

u/AikidokaUK • 6 points • 2023-06-21 05:31 UTC

Source?

Typically, cooling systems are close-loop.

u/GarryChess420 • -1 points • 2023-06-21 15:49 UTC

nope, for industrial and data centre applications that's straight up wrong lmaooo

u/AikidokaUK • 3 points • 2023-06-21 17:32 UTC

Every day's a school day...

But did you really laugh your ass off off off?
