US Data Center Power Consumption

Posted by u/EqualsMCquared • 0 points • 2 comments

I am trying to do some research into US Data Center power consumption by area. Ideally I would like to find a free source that has historical County level data. Does anyone know of such a source?

Things I have found so far:

1. <https://www.datacentermap.com/> good map but does not include capacities or easily downloadable data (API or CSV).
2. <https://www.datacenterhawk.com/> appears to be a paid service and am not sure it is a mega-sheet I am looking for.
3. CBRE, Cushman & Wakefield, and the IEA have okay data on new projects but again in lousy PDFs.

Let me know if any of you have seen something like this in the past! I would appreciate any help at all :)

There is an electricity section on this page. <https://www.eia.gov/petroleum/production/>

The Dominion Virginia Integrated Resource Plan has some discussion on data center demand growth. PJM had also done some reports as the Virginia data center growth could lead to some serious transmission issues.
