[P] Colosseum: Side-by-side LLM comparison platform for energy consumption

Posted by u/jaywonchung • • 0 points • 0 comments

[\[https://ml.energy/leaderboard\]](https://ml.energy/leaderboard)(<https://ml.energy/leaderboard>)

We created a platform for side-by-side LLM comparison that shows the real time energy consumption of your prompts!

This is part of the broader [ML.ENERGY](<https://ML.ENERGY>) initiative where we want to measure and optimize the energy consumption of ML, while being mindful of existing optimization metrics like speed and model/response quality. The Colosseum is intended to give users a real time sense of the energy consumption of generating responses with LLMs of varying size and architectures.
