

AI technology behind ChatGPT built was in Iowa – with a lot of water

Posted by u/NuseAI • • 0 points • 1 comments

- The artificial intelligence technology behind ChatGPT was built in Iowa, specifically in the watershed of the Raccoon and Des Moines rivers.
- Microsoft-backed OpenAI needed a lot of water to cool its powerful supercomputer as it taught its AI systems how to mimic human writing.
- Leading tech developers like Microsoft, OpenAI, and Google have acknowledged the high costs associated with the growing demand for AI tools, including expensive semiconductors and increased water consumption.
- Microsoft disclosed a 34% spike in global water consumption, largely attributed to its AI research.
- A researcher estimates that ChatGPT uses 500 milliliters of water for every series of prompts or questions.

Fake news

<https://www.google.com/amp/s/fortune.com/2023/09/09/ai-chatgpt-usage-fuels-spike-in-microsoft-water-consumption/amp/>

> Microsoft disclosed that its global water consumption spiked 34% from 2021 to 2022 (to nearly 1.7 billion gallons, or more than 2,500 Olympic-sized swimming pools), a sharp increase compared to previous years that outside researchers tie to its AI research.

Microsoft's usage of water increased by 34%, not global water usage itself.
