

Does AI has an impact in the environment?

Posted by u/rasculin • 0 points • 10 comments

Couple of months ago I was hearing a podcast and they talked about the negative impact that maintaining AI caused to the environment, but I honestly didn't understand.

Could someone point me in the right direction or explain me how does AI has an impact on the environment?

Does maintaining AI its very (fuel wise) expensive?

Thanks

Certainly. AI impacts the environment primarily through its significant energy consumption. Training large AI models and running AI operations require huge power, leading to increased electricity usage and carbon emissions.

u/FutureLunaTech • 3 points • 2023-09-19 04:19 UTC

Data centers housing these AI models consume a crazy amount of energy. Tons of servers running 24/7, non-stop. Powering and cooling data centers for massive AI models requires truckloads of energy. This consumption sometimes relies on non-renewable energy sources, contributing to our carbon footprint.

Look up yourself but I remember somewhere saying that every 50-500 tokens used, I forget, it takes about 1/20 of a bottle of water to use it. Now times that by how many people use it and then you tell me if it's bad or not. I don't really know if the water is recycled or if thier is pollutants involved...

Any media about something having an iMpAcT oN tHe eViRoMeNt and pushing for green solutions is a joke and most likely just made up garbage.

In the same way that crypto did. Except the returns for society are exponentially more volatile in terms of value and harm potential.

u/wassdfffvgggh • 3 points • 2023-09-18 17:37 UTC

Training ai models takes a lot of computing power which requires electricity. Generating that electricity may or may not harm the environment depending on what method you use.
