

AI technology behind ChatGPT was built in Iowa – with a lot of water

Posted by u/NuseAI • • 0 points • 2 comments

- The artificial intelligence technology behind ChatGPT was built in West Des Moines, Iowa, where Microsoft has been amassing data centers for over a decade.
- These data centers require a significant amount of water to cool the powerful supercomputer used to train the AI systems.
- Microsoft, OpenAI, and Google are facing increasing costs and environmental impacts due to the growing demand for AI tools.
- Microsoft's global water consumption spiked by 34% from 2021 to 2022, largely attributed to AI research.
- Researchers estimate that ChatGPT uses 500 milliliters of water for every series of prompts or questions.
- Google also reported a 20% growth in water use, largely due to its AI work.
- Microsoft and OpenAI are investing in research to measure and reduce the energy and water consumption of AI systems.
