

CarbonGPT: An AI with up-to-date carbon emissions data

Posted by u/BiologyNerd100 • 0 points • 1 comments

I found this little tool for carbon emissions research, that may be useful / of interest to some of you. Previously I was using chatGPT for emissions data as the interface is way easier to use than trawling through corporate reports. However, the data it returned was either out-of-date or entirely hallucinated.

This chatbot by contrast has access to the Climate Interface API, through this, it's able to quickly and accurately provide emissions data. It can also answer complex questions such as "What's the greenest way to ship some shoes from the UK to China?"

What do you guys think?
