

Am i just imagining things or is ChatGPT's energy consumption growing to concerning levels and growing? (Android APP)

Posted by u/jer_re_code • 0 points • 22 comments

Context: ChatGPT Android App

I am so shocked by the energy consumption because chatgpt is not run locally which means the only things the app should have to do are:

- Handling the GUI
- Handling User Authentication and authorization
- Making API Call Requests
- Handling and storage of user related data [maybe]
- And maybe some times:
 - File access activities and transmission
 - software safety evaluation

These activities uphold never be so intensive, energy consuming wise. (as far as i know)

Or do you think the apps code is just shockingly inefficient?

What else could the app be dooing?

It's busy installing Skynet on your phone.

u/jer_re_code • 2 points • 2024-02-05 20:38 UTC

That's a good one 😊

u/greenbroad-gc • 1 points • 2024-02-02 21:53 UTC

Don't use it bud.

u/DanTheMan_117 • 10 points • 2024-02-02 17:40 UTC

Mining bitcoin would be pointless on a mobile phone. You'd probably have to do billions to even stand a chance.

E.g if your phone could do about 5 mhs of sha256 hashes, then you'd need about a billion phones to do 5 THs per second which would net you about 10.7964 USD or 0.00024950 BTC per MONTH...

And that's only if your phone could produce that many hashes..

u/jer_re_code • 1 points • 2024-02-02 19:12 UTC

wooosh

but I still appreciate you for beeing a nerd

u/DanTheMan_117 • 5 points • 2024-02-02 19:15 UTC

I got the joke but, nerd gotta nerd yk.

u/jer_re_code • 1 points • 2024-02-02 19:36 UTC

thats true

and Iconic user nsme by the way👍😊

u/jer_re_code • 2 points • 2024-02-02 13:58 UTC

i constantly use YT Music some days even listening to msic 8 hours

it never used that much power in a time as short as this

it does use a big amount of mobile data and storage though

And yes i have it on (i don't really care about most of my data) the only data i handle with care are official documents, api keys and passwords. I even had a part of my dna on github for a short time (about 2 or 3 months)

u/MysteriousPayment536 • 3 points • 2024-02-02 14:42 UTC

Did you chat via voice conversations

u/probablyTrashh • 1 points • 2024-02-02 16:17 UTC

I tried it once. Locked my phone not knowing it continued to listen and respond, and was at work in a loud environment. It listened to me and my coworker talk for the next 15 minutes and was responding the whole time in my headset I wasn't wearing. Oops.

u/jer_re_code • 3 points • 2024-02-02 15:21 UTC

nah but would be a good call though

u/MysteriousPayment536 • 1 points • 2024-02-02 16:56 UTC

Probably the app code is extremely inefficiënt, OpenAI is more a research company than a product company

u/jer_re_code • 1 points • 2024-02-02 19:10 UTC

thats a good point, didn't think about that because they seem really commercially driven in the past year

u/RRRobertLazer • -6 points • 2024-02-02 13:42 UTC

Delete that shit. Fuck them for what ever they are sneaking in while severely limiting gpt responses and capability

u/jer_re_code • 7 points • 2024-02-02 14:08 UTC

i would but i am too curious to look for what is happening though

u/RRRobertLazer • -12 points • 2024-02-02 14:09 UTC

This whole AI craze is a half baked gold rush. Every company is trying to figure out how to fuck you over in some way without you knowing why or how

u/jer_re_code • 1 points • 2024-02-02 15:16 UTC

i think what you wrote is kinda true in some ways and completely incorrect in others

i have worked in ML 6 years ago for only a year so my knowledge about how companies handle it is quite out of date i guess, but even back then LM was looked at by companies who knew only about the financial surplus you got when AI was in the description of your product but not knowing what it really means as if it is a magical technology wich always makes every product better, wich caused some of our customers to be ripped of basically by legitimate businesses wich happily put ai ib every product they wanted in even if it was completely unnecessary and even sometimes resource wasting, sometimes for the mere reason of beeing able to write AI in the products description. So you are right on that part.

BUT the shear number of possibilities wich where made possible basically over night by the breakthroughs of the last few years are not like the gold rush because this technology is groundbreaking at the current point in time and future development cannot be predicted at the current point in time because always when someone did make a fact based prediction it was always met way ealier than expected.

And it is one of the few scientific topics where so much new can be discovered that it doesn't feel like other fields like for example physics wich is basically stuck in a softlock for the last couple of decates. And not only that it opens new possibilities in AI itself but it aldo opens possibilities in nearly all academic topics woch weren't possible before that.

u/_Wyse_ • 4 points • 2024-02-02 15:13 UTC

That's nothing new to AI, and has more to do with the existing tech landscape the AI was built upon.

u/VashPast • 3 points • 2024-02-02 12:31 UTC

Do some testing. Does it consume this kind of power if you turn your antennas off?

u/jer_re_code • 1 points • 2024-02-02 14:06 UTC

you are right that's a great idea

will probably run a python script on termux to watch it a couple of days and to dissable and enable internet connection repeatedly when i am sleeping if the termux api has an interface for accessing app usage data

u/isthatpossibl • 15 points • 2024-02-02 12:19 UTC

I think I've seen my CPU spike on the browser version as well. The amount of energy they are putting on users is almost criminal. I think it's running tests to see if you are real.

u/jer_re_code • 8 points • 2024-02-02 14:01 UTC

yeah constant mouse tracking for evaluating if someone is a human and the evaluate of how perfect our imperfect the movements are would be a method of this subtopic wo could be this expensive in energy use

u/Choice_Comfort6239 • 23 points • 2024-02-02 12:15 UTC

You have haptics on?

u/Professional_Job_307 • 9 points • 2024-02-02 13:23 UTC

Youtube music runs in the background probably
