AI Computing is on pace to consume more energy than India

Posted by u/FarPercentage6591 • • 0 points • 0 comments

I know how much you folks like infographics that show us scale of current AI-boom and I like it too.

Below is an estimate of the amount of **energy burned by H100 GPUs sold in 2023**. This amount of energy is **enough to power ~4 million people** (Georgia population)

<https://preview.redd.it/qobglpl367vc1.png?width=2150&format=png&auto=webp&s=be9a24f307457eb53ab2f77818cedb7637bf0220>

And yesterday ARM CEO Rene Haas said that "by 2030, the world's data centers are on course to use **more electricity than India**", the world's most populous country" (you can google this quote for a proof)

Wow! Is the contribution to the global economy of AI computing comparable to that of 1.5 billion people?
