

Google falling short of important climate target, cites electricity needs of AI

Posted by u/Adventurous_Motor129 • 0 points • 6 comments

Oops. Despite goal of net zero by 2030, due to greater electricity used by data centers & AI, Google was up 13% in 2023 & up 48% since the baseline year of 2019.

Yet you can guarantee they will push anything negative about climate alarmism to the back of any seach...if mentioned at all.

We promised, but you, know the situation changed!

u/JTuck333 • 2 points • 2024-07-03 23:19 UTC

But they'd ignore the needs of poor people who want energy.

u/StedeBonnet1 • 1 points • 2024-07-03 17:34 UTC

The are beginning to realize that their Climate Change Emperor has no clothes.

u/SftwEngr • 2 points • 2024-07-03 05:46 UTC

Can't Google just go bankrupt? We'd all be far better off.

u/Jaicobb • 4 points • 2024-07-02 22:00 UTC

I'm sure they planted 5 trees somewhere to offset this so it's all good.

u/SftwEngr • 1 points • 2024-07-03 05:46 UTC

No. They cut down trees and bury them in order to save the planet. It was the damn trees after all! Grrrrr...

u/LackmustestTester • 3 points • 2024-07-02 21:31 UTC

Good for them they're too big to fail, so in case of a shortage it's the random users that would have to face a little outage - South Africa is a good example here. But at least you can still watch funny videos on your smartphone and charge the device at your local generator owner.
