

Which generative AI systems run on renewable energy?

Posted by u/Betanumerus • 0 points • 2 comments

I come across many articles lately saying AI has a large carbon footprint, so I want to know which AI companies/systems choose renewables instead.

that's... not how it works.

They're AI companies, they have datacenters, not powerplants. Microsoft is looking into powering their datacenters with miniaturized nuclear reactors but I mean, in general.. you don't.. choose what kind of footprint you have unless you're intercepting something like solar energy at your home. Everything just runs off the grid. The grid itself has capacity. Renewable energy adds power to the grid. Phasing out old powerplants removes power from the grid. It's a slow transition. AI companies just have power.
