

Generating 1 x Ai image takes as much power as charging a phone ?

Posted by u/Excellent_Box_8216 • 0 points • 34 comments

It's crazy that generating an AI image uses about the same power as charging a smartphone. How about 1 minute AI video, how much power are we really talking about here?

Know what else is crazy? Rendering a 3D scene to a image.....

Which ironically uses more electricity than generating a 2D image using AI. How and why is it so crazy to people? 🤔😂

u/spacketlulbs • 1 points • 2024-08-11 05:35 UTC

AI video generation is definitely more power-intensive than generating images. However, specific power consumption would depend on the length, resolution, and complexity of the video. On a side note, if you're into AI for research, Afforai is pretty solid for handling literature reviews efficiently.

Just think of how much power it took to train the model!

Since AI arrived at Google, their energy consumption went up 50%.

Hello sir! I'm writing a school paper about this, would you be able to help me find data of where this came from? Thanks!

u/Ok-Analysis-6432 • 1 points • 2024-11-29 14:15 UTC

hello mam btw

sorry forgot to be sassy

Ppl judging this statement by the amount of 🦾 city their computer used are missing the point.

Please read.
