

Is using CHATGPT ethical in the environmental sense?

Posted by u/Secure_Increase9209 • 0 points • 10 comments

I'm trying to understand how a chatgpt conversation works. does it use up water just because i asked it questions? or is the insane water usage only during the AI training process. I want to use chatgpt, i just don't want to contribute to the environmental decline.

All data centers and computer servers use electricity, water, metal, wood, and all sorts of material to build and run. The only no non-sense way to understand the overall cost of doing anything is through its market price. But people are poisoned by environmentalism non-sense will never understand the point, emotion is more important to them.

that's not accurate because startups and big tech will operate on loss for years to gain marketshare. LLMs particularly use a lot of electricity, a lot more than just data centers.

u/HolidayPsycho • 2 points • 2024-08-13 21:12 UTC

The point you are making about businesses sometimes take losses to operate is largely true. We can get better estimates if we can factor in the losses.
On the other hand, the \$20 overall cost takes account of all the cost, not just electricity.
