Monthly Insights on AI and Energy from a PhD in the Field

Posted by u/NoseSpirited3196 • 0 points • 0 comments

Hi community,

I've been working for several years applying machine learning techniques in the energy sector, particularly in buildings. During this time I've been deeply involved in exploring how AI can enhance energy efficiency and sustainability.

I recently started [**Reimagine Energy**](https://benedettogrillone.substack.com/), a Substack newsletter where I analyze the most significant events at the intersection of AI and energy. You can check my latest post here: **Powering Data Centers: How AI is Shaping Energy's Next Chapter**](https://benedettogrillone.substack.com/p/powering-data-centers-how-ai-is-shaping)**.**

For those who enjoy getting into the technical details, I occasionally also publish code tutorials on ML applications in energy.

I thought some of you might find these insights valuable. Feel free to check it out if you're interested!

Great to hear that they're being helpful! I'm working on one about using the Google Solar API to estimate PV production potential, hopefully out by the end of this week ☀️

TYSM! That's actually just what I needed for the project I'm working on rn
