

So this is crazy, what about the environmental effects that AI (art) has on the environment?

Posted by u/Flaky-Entrance-7516 • 0 points • 22 comments

Just because other corporations and companies are worse, doesn't mean AI isn't objectively bad for the environment like Carbon emissions/ Water Consumption/ Energy. What if we just don't minimize the use AI until we figure out how to downscale the ecological effects it has on the environment. Your fundamental activities can wait. I'm not asking for a complete stop, I'm asking to other to **think** about a pause for perfection, and use your voice for your concerns. These companies are for sure aware of the issue and some are taking initiative. Sure, its fun, but remind yourself of the detriments of your actions and keep yourself informed on the negative effects that AI can have. I just wanted to bring awareness to the topic incase some people, to not only expedite the process but, reach those who are ill-informed. Remember that Ai can be bias/ misleading, so do your own research. As long as you know how much energy/ the outputs of generation takes, feel free to use it as you please with that in mind.

Fallacies in this post:

- * "Just because other corporations and companies are worse, doesn't mean AI..."—AI isn't a corporation or company.
- * "doesn't mean AI isn't objectively bad for the environment"—Nor does it mean that it is.
- * "like Carbon emissions/ Water Consumption/ Energy."—Those are all valid words, but you have not defended your thesis, just stated it as conclusion.

This goes on in a similar vein for some time... you never justify your conclusions, just barrel on as if you'd proven your case.

Your hour of Minecraft gameplay costed more in carbon emission than all the images i generated for the past month.

Let's get rid of the meat industry first.
