# How much Energy is AI using?

Posted by u/monkey-majiks • • 0 points • 0 comments

I wondered how much energy copilot is using and after disappearing down an internet shaped rabbit hole, found this project:

EcoLogits tracks the energy consumption and environmental impacts of using generative AI models through APIs. It supports major LLM providers such as OpenAI, Anthropic, Mistral AI and more.

API is here:

<http://ecologits.ai/latest/>

They also have a user friendly calculator here:

<https://huggingface.co/spaces/genai-impact/ecologits-calculator>

Thank you, that's a useful way to demonstrate the power hungry nature of this mediocre-at-best foolishness.
