Energy Use for ChatGPT Requests vs. Light Bulbs? PS5?

Posted by u/Adventurous_Data_318 • 0 points • 1 comments

Hey everyone,

I recently heard that each request to ChatGPT supposedly uses the same amount of power as leaving a lightbulb on for 15 minutes. That got me curious: if we take that average power consumption into account, how much power does ChatGPT actually use compared to, say, playing PS5 for the same amount of time?

I'm curious because I recently heard some people freak out about it, but then they went on to play PS5. I bet if they had been constantly using ChatGPT that whole time they would be using less power...

Even an electric car?
