“It costs a bottle of water for every AI generated image. “

Posted by u/StarsapBill • 0 points • 55 comments

Well I drink 3 bottles of water when I make a human made images. We need to stop human made art to stop climate change. /s

Agreed, AI is much more important than OP.

This is a bad faith argument

The water you drink while making art yourself is water you would've consumed anyways.

People who generated images often do that often, and if they make it for a reason they will remake the result.

In addition to some image generators creating several images from the get go by default. That's already more than your daily intake if you use something that does it like that one that was super popular a few years ago.

If you generate 50 attempts for one image, it's almost a shower. You made 3 things with a purpose and need them to look right? This can easily pass the average person's daily intake of water.

When working on a larger project or if you are a perfectionist, you can use enough water to waste as much as several people. You do that regularly, and you are several times more wasteful than a normal person.

Now add it up to millions of people doing that and you start getting some pretty intense damage.

And the problem is that the way AI functions you are ENCOURAGED to generate more, generate

faster, generate revision, and do that on the toilet.

As someone who grew up in a dry country which always had issues with water, seeing people do that gives me a feeling of disgust similar to how I feel if someone regularly leaves their tap slightly on.

It's false to state that all AI computing uses water.

There are closed loop systems that reuse the same water over and over again.

Some don't use water at all.

There are also centers that are located in parts of the world where the temperature is low enough that they use air circulation from outside to cool the equipment.

u/hanmoz • 1 points • 2026-01-13 13:00 UTC

In that case we need to make MOST data centers in cold places, in a family dinner I had recently I found out that every guy my age or lower in the family is prompting images several times a day.

Cleaner energy for AI will definitely remove one of my issues with it, and while I'll be watching my career burn, I hope that at least my world doesn't

u/Stappy_stapper • 1 points • 2025-12-01 13:18 UTC

Pretty stupid statement ... 1) gen ai is mostly used for stupid slop images. 2) you'd drink that with or without making human art.

u/jjrroodd75 • 1 points • 2025-08-20 21:08 UTC

I'm pretty sure the water is cooled and recycled for use in a closed loop system. This is the same thing as the coolant in your car. A car will use 300-600 gallons of water per hour to cool the engine. But it's the same 10 or so gallons recirculating for years. These arguments are getting ridiculous.

u/SouthernPraline6119 • 0 points • 2025-06-25 19:45 UTC

Oh my god it's like you can fucking get a reusable water bottle instead of being a shithead trash machine?

u/No_Resolution_790 • 0 points • 2025-06-19 06:48 UTC

Wow that's amazingly stupid.. piss can relatively easy become drinking water again, the water they use for cooling systems not

u/Standard_Bug_2678 • 0 points • 2025-06-09 19:53 UTC

Lol the water AI uses it just evaporates 🤔

Average American pig brain will never understand even some simple science, bro thinks his piss also evaporates 🤔

Just wait until the META centre fucks your life completely then you will be drinking your own blood.

u/No-Paramedic9972 • 1 points • 2025-06-03 07:05 UTC

Water consumed by a person eventually being recycled and consumed by other beings later on vs water evaporated cooling data centers
