I'm tired of hearing about the AI water usage from non vegans lmao

"chatgpt consumes a half liter for every 100 words-" but theyre scarfing down beef patties daily without a second thought. A 1 pound beef patty takes 1800-2000 gallons, thats 6800-7500 liters of water for a single 1 pound patty. I don't use AI but the hypocrisy is LAUGHABLE (and also incredibly annoying).
