

[Academic] AI Google Search Results: Accuracy, Environmental Impact, and Sentiment Analysis (for students and Google users)

Posted by u/mountain_luvr3887 • 0 points • 1 comments

My classmates and I are researching Google AI Overview, the pop-ups you get when you search for something that is formulated by AI. Have you felt it has made a difference to the way you process information? Do you trust the information shown? Do you consider the environmental impact of the overviews? What are your general thoughts? These are some questions you can explore in this survey! All answers are anonymous, and only require you to put your current role/position (student, staff, faculty, etc).

This survey is intended for students who use Google to research specific information OR any other Google user, who has felt a positive or negative impact from the AI Overview.

Take the survey (5-10 mins) here: [<https://form.jotform.com/250796906939072>]

Please remember to be civil. We also ask that users report the following:

* Surveys that use the wrong demographic.

* Comments that are uncivil and/or discriminatory, including comments that are racist, homophobic, or transphobic in nature.

* Users sharing their surveys in an unsolicited fashion, who are not authorized (by mods and not OP) to advertise their surveys in the comments of other users' posts.

And, as a gentle reminder, if you need to contact the moderators, **please use the "Message the Mods" form on the sidebar.** Do not contact moderators directly, unless they contact you first.

I am a bot, and this action was performed automatically. Please [contact the moderators of this subreddit](/message/compose/?to=/r/SampleSize) if you have any questions or concerns.
