What does figure 4 (picture 2) tell? I don't get the graph at all.

What in the world is tonnes of CO2 avoided by selected lifestyle choice accounted for by policy?

And what does ChatGPT have to do with it? If it is CO2 avoided, then compared to what? Not using GPT?? How would that work? Electric cars can be compared to fossil fuel cars, but what do you compare chatGPT to?

And LED bulbs save only that little?

u/Celebrir • 7 points • 2025-04-13 19:50 UTC

The hell is this supposed to be?

This feels like a chart used in a buzzfeed article

u/The_RottenEgg • 6 points • 2025-04-13 19:48 UTC

Very interesting, but does it account for the training of the chat? I think that might be more resources intense than the actual public usage

u/arbitrageME • 8 points • 2025-04-13 19:41 UTC

Wait, chatgpt is noticeable on a graph that includes YouTube and Netflix? And it's not even in its final form yet? That's scary beyond belief for the amount of energy it will consume.

AI will require us to build a Dyson sphere to feed it.

I figured it out. ChatGPT wasn't released until 2022, so no wonder it's using no water in 2019 and 2020

Incredibly insightful analysis of the data here!

:)

> Please note this page was last updated in 2020

Good thing nothing notable has happened with AI since then!
