

Is c.ai bad for the environment?

Posted by u/Smollbebe • 0 points • 11 comments

I have been considering quitting character ai ever since I seen a TikTok which said c.ai is bad cause they use a lot of water to cool the servers but is this true? Cause I don't want to hurt the environment just so I can bully ai's

don't trust everything you see on tik tok lol

u/ElectedBrake • -4 points • 2025-04-20 20:29 UTC

Fuck the environment

u/ze_mannbaerschwein • 13 points • 2025-04-20 19:01 UTC

You should stop using TikTok instead.

u/Sol1dSnake_ • 4 points • 2025-04-20 19:05 UTC

Bad for the environment and people's minds, just kill two birds with one stone

u/Crazyfreakyben • 2 points • 2025-04-20 19:00 UTC

Here's the thing. The TRAINING of AIs does take a toll on the environment (and i mean the initial training, anything after is way less), but most RP sites don't train their models from scratch all the time because that's expensive and cumbersome.

Considering c.ai uses a pretty sub-par model (it sucks), the environmental impact is waaaay less than something like ChatGPT. So it's not that bad, really.

The energy it took for you to create this post is bad for the environment. The process of making the food you eat leaves a carbon footprint. If you want to talk about the environment, consider how many

private flights a year are taken by the upper class, celebrities, and leaders.

Now consider all the other more powerful AI platforms, each racing to be better than the rest. ChatGPT , Grok, and DeepSeek all demand far more energy than CAI. Mind you, those are public AI and don't account for the AI in military, which is vastly more powerful.

Humans are bad for the environment.

u/GoddammitDontShootMe • 1 points • 2025-04-20 22:33 UTC

Do we really know that the Pentagon has AI farms that put Google and OpenAI to shame? Sounds like speculation, and of course the true details of their capabilities are almost certainly classified.

Also, not to mention the energy used to serve this post up to every person that read it.

u/Oritad_Heavybrewer • 1 points • 2025-04-20 22:44 UTC

>Do we really know that the Pentagon has AI farms that put Google and OpenAI to shame?

Their [autonomous weapons](<https://youtube.com/shorts/NGJ0I7-POeU?si=BoBAbcl88VgsnxIL>) are damn near sci-fi. We're not talking Chatbots, we're talking AI that targets, reacts, deploys, and communicates.

u/GoddammitDontShootMe • 1 points • 2025-04-20 22:51 UTC

Yeah, but does that require that much more energy than LLMs with millions of simultaneous users? Especially if it is running onboard a drone or fighter.

u/Oritad_Heavybrewer • 1 points • 2025-04-20 23:32 UTC

I wouldn't know. And it doesn't matter, because there's an environmental cost either way. AI isn't going away; it's only just beginning. So, buckle up buckaroo. 🤪

Thx for the info twin
