

I made a Chrome extension to show CO2 emissions and water usage from ChatGPT queries

Posted by u/dadabhai_naoraji • 0 points • 3 comments

Available [here](https://chromewebstore.google.com/detail/chatgpt-co2-tracker/hkjljphcfcpfjdknlpolgofpceebjpha).

The goal is to make people aware of the environmental impact of their ChatGPT queries, and hopefully nudge them to be more judicious with their questions. Currently, the numbers are a rough estimate.

The extension displays the emissions from the current chat, as well as the user's overall emissions at the top of the page.

I've open-sourced the code [here](https://github.com/utkarshdalal/chatgpt-co2-tracker), so anyone's welcome to fork it and play around with it. Ironically, I built this using Cursor with Sonnet 3.7 and Gemini 2.5.

I'm over here trying to figure out how to get it to do my laundry

I wish awareness equated to caring.

Indifference is the biggest hurdle here.
