

Energy Consumption Google AI

Posted by u/nacktsnegge1337 • 0 points • 5 comments

Google recently embedded Gemini in the casual google search to show AI generated answers and I was wondering if that jacks up the energy consumption of a google search, since the latest consens was that one AI-prompt or querie requires ten times more energy than one google search??

There is no scientific data to compare AI results vs Indexed results, it is not a linear comparison, indexed links usually are follow up by a sequence of actions in the site itself, and that overall workflow might consume more energy than reading the AI generated answer from Google which removes that extra compute and human energy.

We have reverse engineered UAP, I don't think we're going to need to worry about energy production soon enough.

Here's a NASA sponsored podcast on the topic

<https://www.shoshinworks.com/podcast-episodes/beyond-conventional-physics-extended-electrodynamics-lattice-confinement-fusion-zero-point-energy-advanced-propulsion>

And here's a recent whistleblower from the US state dept who came out last week and hopefully will be testifying under oath next week to congress

<https://youtu.be/ZAxI-LDrDqA>

Depending on how this plays out, we might be on the verge of finding out that we have potentially have access to technology to give us unlimited clean energy.

Wouldn't be nice to not feel guilty for being alive...? 🙄

Meinst du damit, dass wir bald die Energie der UFOs nutzen können?

Zero point energy has gotta be a scam

u/poetry-linesman • 1 points • 2025-05-13 14:05 UTC

Based upon what? There are my receipts, NASA-affiliated presentation with DOE staff discussing the topic.

Where are your receipts?

u/Capital_Pension5814 • 1 points • 2025-05-13 14:12 UTC

I'm just saying, I don't think I can trust these peoples' credentials because it's been a well known fact that you can't create energy or destroy it, where would the energy for zero point come from? If you cool something down then heat it back up, you're still left with the same amount of energy in system.

u/RabbitFace2025 • 1 points • 2025-05-06 17:37 UTC

I want to know if neuromorphic computing actually has a chance of working--my understanding is that it consumes WAY less energy than the giant AI servers.

Educational Resources Posting Guidelines

Please use the following guidelines in current and future posts:

- * Post must be greater than 100 characters - the more detail, the better.
- * If asking for educational resources, please be as descriptive as you can.
- * If providing educational resources, please give simplified description, if possible.
- * Provide links to video, jupyter, collab notebooks, repositories, etc in the post body.

Thanks - please let mods know if you have any questions / comments / etc

I am a bot, and this action was performed automatically. Please [contact the moderators of this subreddit](/message/compose/?to=r/ArtificialIntelligence) if you have any questions or concerns.
