

10 minutes of toaster uses about as much energy as 100 AI image generations. Do we really need all that breakfast crunch? Seems wasteful! Think of the Environment!

Posted by u/3xNEI • 0 points • 36 comments

****100 AI image generations $\approx$ 0.04 kWh****

That's the same amount of energy used by:

- * 10 minutes of toaster use (toaster $\approx$ 1.2KW)
- * 2 minutes of microwave cooking (microwave $\approx$ 1.2 KW)
- * $\sim$ 1.6 minutes with a hair dryer (hair dryer $\approx$ 1.5 kW)
- * $\sim$ 2.7 minutes of coffee maker time (coffee maker $\approx$ 0.9 kWh/hour)

So next time you toast bread, microwave leftovers, dry your hair, or brew coffee,

Remember...That's a whole gallery of AI-generated cats you could've made instead. Choose wisely.

Think about *the environment*!

/gestures dramatically in shaming fashion.

OP you really should learn the difference between power and energy.

u/pontiflexrex • 6 points • 2025-05-08 07:04 UTC

Useless whataboutism. Please ask your ai girlfriend to suggest reading materials of fallacies and the need of critical thinking.

u/Erbsensuppe666 • 2 points • 2025-05-08 06:14 UTC

How about a toaster that can toast AI images onto the bread? That would be less wasteful I guess.

I'd love that. "Toast me an image of me strangling my boss" would certainly be a hit with many people in the mornings!

u/-OrionFive- • 2 points • 2025-05-08 06:27 UTC

And behold, a new profession is born: toast prompt engineer!

u/JaggedMetalOs • 3 points • 2025-05-08 05:57 UTC

Why don't we have both?

<https://i.redd.it/x5qexvmbzhze1.gif>

Anyway on a serious note yeah individually running a single image generation is inconsequential, but what adds up is datacenters full of GPUs doing 24/7 training and companies adding unsolicited AI requests to everything (looking at you, Google AI Overview)

u/LittleThiccRedLuigi • 2 points • 2025-05-08 05:40 UTC

10 minutes of toaster use would be $1.2 \text{ kW} * 10/60 = 0,2 \text{ kWh}$ and not 0,04 kWh. Or did i miss something?

u/Worldly_Air_6078 • 6 points • 2025-05-08 05:33 UTC

Not to mention the millions of GPUs running in the basements of banks to try and seek really big prime numbers that no one found before.. That's called blockchain and bitcoin. That's completely useless, absconse and obstruse,
91 TeraWatts hour per year. More than a country like Norway or Finland.
One transaction is about 500 kWatth

u/liquidmasl • 1 points • 2025-05-08 08:27 UTC

most blockchains dont use proof of work anymore, your argument is outdated.

bitcoin still dies those, and its used for nothing but investmens, which is indeed absurd

u/yahwehforlife • 1 points • 2025-05-08 05:28 UTC

Literally fuck toasters... stealing our jobs!!!

u/Commentator-X • 6 points • 2025-05-08 04:30 UTC

You could probably say that about all cooking methods. The difference is we die if we don't eat.

u/selfawaretrash42 • 2 points • 2025-05-08 05:58 UTC

Lol. People will argue then good food is unnecessary for sustenance and compare with how AI enriches lives.

Pointless arguments on both ends bcz people who wants to use will use it regardless

No source. Good job. Guess you are ranting about vaccinations in other subs also.
