

Is Gen AI Bad For The Environment

Posted by u/JCunliffeUK • 0 points • 59 comments

I've been having fun making comics with ChatGPT and posted one a couple of weeks back in the ChatGPT subreddit, along with a list of deep research material for the facts and figures to back it all up. I was surprised when the majority of the comments were negative and attacked my character rather than the information presented.

I don't think the information does any harm other than comparing the energy usage of single-image gens to everyday activities, such as cooking, cleaning, and playing games.

I've continued making the comic regardless and have now begun turning it into a motion comic too. I hate the stigma against the use of AI-tools, and want to find communities that embrace the tech.

I've been carving a couple of hours out of each day to build these for fun, but ultimately, I want to use them as an example to show aspiring creatives that they can build their own worlds and IP with AI-assisted workflows.

Now do water usage compared to common tasks, then when the other character mentions "Training" do water usage training GPT 4 vs *alfalfa farming*, beef production, industry, air travel, etc

Oh... my upscaled furry porn folder has over 20,000 images... and those are just the best I've done...

...aw fuck.
