

Proof that diffusion AI models are not bad for the environment

Posted by u/Frequent_Research_94 • 0 points • 5 comments

I can use an image generator on my phone with a 5000mAh battery (standard). The percentage does not go down by a percent, the smallest amount it shows, when I do this.

Yes, I know the battery % is an estimate, but it is pretty precise, and definitely not more than 2x off.

Some real science you're doing there

u/Frequent_Research_94 • 0 points • 2025-05-17 11:06 UTC

I don't need a double blind $p < 0.05$ peer reviewed study to read the battery % on my phone

u/Haunting-Ad-6951 • 0 points • 2025-05-17 12:27 UTC

And I don't need geology to mix vinegar and baking soda together to learn how a volcano works.

u/Frequent_Research_94 • 1 points • 2025-05-17 12:29 UTC

To continue the analogy, if you are standing at a volcano, you can say whether it is erupting or not.

Does it generate on your phone? Does it work with no internet (locally)?

u/Frequent_Research_94 • 4 points • 2025-05-14 18:46 UTC

Yes, with airplane mode on

u/BlackoutFire • 2 points • 2025-05-14 18:47 UTC

Which software are you using for the generation?

u/Frequent_Research_94 • 2 points • 2025-05-14 18:49 UTC

Stable diffusion

u/BlackoutFire • 3 points • 2025-05-14 18:51 UTC

Through which app? And what phone are you using?

iPhone, I've used multiple apps
but just running the base diffusion
executable on my phone seems
to work well
