

AI Is Thinking Electricity!

Posted by u/Zestyclose-Pay-9572 • • 0 points • 39 comments

When electricity was first harnessed, think Faraday, Volta, Tesla, it was a curiosity before it was a utility. It sparked public lectures, street experiments, and debates in scientific salons. People knew it was powerful. But they didn't know what it was *for*. It took decades before it rewired the world lighting cities, powering industries, and eventually giving rise to computers.

AI today is at a similar inflection point. AI is thinking electricity.

Just like electricity is now invisible, embedded in walls, appliances, vehicles, AI will fade into the fabric of everything: healthcare, law, education, logistics, warfare, therapy, religion, relationships. But this time, it's not energy. It's intention and inference being scaled.

Just as no one says "I'm using electricity now," we won't say "I'm using AI." Because AI will not just be fundamental.

It will be foundational.

That's how I feel when I see posts mentioning ChatGPT server outage!

Dumbest thing I read all day

u/final566 • 1 points • 2025-06-10 20:28 UTC

 correct

u/gigaflops_ • 2 points • 2025-06-10 18:25 UTC

Real neurons are also thinking electricity

u/lambdawaves • 2 points • 2025-06-10 16:48 UTC

I can't find the reddit comment anymore, but someone described computer chips as basically magic:

"We shine light on rocks so the lightning knows where to go"

u/Professional_Pie_894 • 1 points • 2025-06-10 16:46 UTC

fucking slop

u/Any_Satisfaction327 • 2 points • 2025-06-10 16:14 UTC

AI today feels like the early days of electricity. Mysterious, powerful, and about to become invisible infrastructure.

u/Typical_Ad1675 • 2 points • 2025-06-10 15:59 UTC

This is a brilliant take! I totally get what you're feeling. Your comparison of electricity and AI, how they both started as curiosities before becoming this invisible, foundational part of our lives, is spot-on. The whole "AI is the new electricity" thing has been floating around, but your explanation of why it is, and how deep this integration could go, really hits different. We're definitely at a tipping point. Right now, we're all hyped about (or annoyed by) specific AI stuff, like ChatGPT. It's kinda like folks in the 19th century getting a kick out of electric light bulbs or Faraday's experiments. They were new, they were visible, they showed what was possible. But like you said, there'll be a day when AI is as common and unnoticed as the electricity powering our homes. We won't even think about it until it glitches (hence your frustration with ChatGPT outages!). Your point about AI scaling "intention and inference" instead of just energy is particularly insightful. That's a key difference. AI won't just be doing tasks; it'll be helping us make decisions, understand the world, and maybe even shape our interactions on a much deeper level.

It's both super exciting and a little mind-bending to think about how deeply AI will weave into everything, from healthcare to religion. But your line, "AI won't just be fundamental. It'll be foundational," really nails that vision. Thanks for sharing such a thought-provoking perspective on the future of AI! What part of this future excites you the most?

u/imelda_barkos • 1 points • 2025-06-10 15:57 UTC

it's not thinking at all. it's just a million if/then statements in a trenchcoat.

"AI" is controlled by a small handful of trillionaires. It's not democratic. It's not transparent. It's not even decentralized. All of those other things you mentioned are, well, not like that.

u/Zestyclose-Pay-9572 • 1 points • 2025-06-10 22:02 UTC

It was 'open' source Ai before it is closed. I think it is very important to keep it away from closed model!

u/imelda_barkos • 2 points • 2025-06-11 04:26 UTC

yes... but ChatGPT is very much very closed now. zero transparency and zero accountability

u/Zestyclose-Pay-9572 • 1 points • 2025-06-11 04:32 UTC

We need Richard Stallman back !

u/Ok-Analysis-6432 • 2 points • 2025-06-10 15:55 UTC

it's thinking rocks,

you can use other stuff than electricity to animate the rocks, but the core technology is rocks.

u/Top-Artichoke2475 • 2 points • 2025-06-10 15:26 UTC

We are also thinking electricity.

u/Pax_Americana_ • 1 points • 2025-06-12 13:49 UTC

Was looking for this. You need the correct amount of sodium in you so your meat mech can let electricity channel through you.

u/Pleasant-Contact-556 • 1 points • 2025-06-10 15:25 UTC

congratulations, you've invented the calculator
