

What causes the most carbon emissions for Open AI Learning Models? Individual Consumers, or Big Tech & The Military?

Posted by u/Historical_Round_855 • 0 points • 1 comments

I've been noticing the common sentiment towards individual consumers who use chatgpt to be intensely negative, people equate it to doing illicit substances etc.

The argument against individual consumers using chatgpt or AI always bothered me as missing the mark. I have to imagine that the big tech companies and the military are running huge AI Learning Model projects that we're hardly even privy to and the aggregate consumption of open AI by individual consumers is relatively speaking negligible.

I suppose I just find it frustrating that people vilify individual users as being anti-environment, or lazy, dumb and stupid. And then they refuse to engage in conversations surrounding legislation surrounding AI and don't bother to criticize any of the companies or military that uses it. It's like they just want to claim a higher morality on something we don't even have all the information for yet.

Idk but the more I look into it the more I feel surprised that shifting responsibility of carbon emissions from the individual consumer to Big Tech and the military is considered a "hot take"
