

# One vegan saves more water in a year than 150 million AI prompts consume

Posted by u/big\_red\_couch • 0 points • 141 comments

Often I see people on social media bashing AI for its water use. While it certainly does occur, the comparison to the impact of an animal product-filled lifestyle just doesn't come close.

A typical meat-heavy diet uses somewhere between 4 and 5 million liters of water per person per year. The average vegan diet, on the other hand, uses about 1 to 1.5 million liters per year. That's a difference of around 3 million liters annually. Each ChatGPT prompt uses around 0.02 liters of water. To reach 3 million liters of water, you'd have to send about 150 million prompts. Absolutely bonkers.

Honestly, concerns about the environmental impacts of AI being made by meat eaters ring so hollow

I am probably going to get downvoted in oblivion but I have been thinking about this post the past couple days and while the "point stands," two things are true and \*\*need to be accepted as true.\*\*

as vegans we should be trying to reduce our entire carbon footprint. AI aside, I'm "only saving" 5000 gallons of water a year by primarily using my dishwasher. and while I understand the math to 5000 gallons is 250,000 AI queries... Google alone averaged 14 billion searches a day last year. like... that's still 280,000,000 gallons of water used by Google for the search queries by themselves. thats not a small amount of water and that is pulling resources away unexpectedly from the outside environment. this damages not only the world's environment, but especially local environments feel the impacts of AI.

That aside, xAI is irreparably damaging the environment, water aside, in a predominantly Black community in my current state and no one seems to actually gaf. please don't ignore a \*huge\* portion of the impact of AI. AI requires land area in order to operate (further deforestation, displacement of communities). It also uses excessive amounts of fossil fuels to power the electricity necessary to complete a query. [One part of the reason is that big tech companies don't share the carbon footprint of training and using their massive models, and we don't have standardized ways of measuring the

emissions AI is responsible for.](<https://www.technologyreview.com/2023/12/05/1084417/ais-carbon-footprint-is-bigger-than-you-think/>)

AI is a fantastic tool. It will change all of society and it isn't going away. I use it every single day. I'm also a vegan. The two are not in conflict.

**u/sternumb** • 1 points • 2025-06-17 06:10 UTC

Fuck AI regardless

**u/OutcomeFresh8588** • 1 points • 2025-06-17 00:57 UTC

But what if they're hydro homies? Maybe not then
