

Is character ai contributing to carbon emissions?

Posted by u/Clean_Association_48 • 0 points • 7 comments

So I've been seeing a whole bunch of videos on TikTok about how character ai is ruining the environment, I'm not really a big fan of ai in general but I've never really considered that character ai might contribute to carbon emissions.

I also don't see why we're going after individuals instead of the giant companies for using ai, the people alone aren't going to make much of a difference. I really just want actual sources proving that c.ai is bad for the environment or if this another way for people to shit on people who use c.ai.

Can't be any worse than all the other stuff that negatively affect the environment. People just like to complain. It gets the views.

It is technically bad for the environment due to how much energy it is utilising, and also the amount of carbon emissions it is getting out. I heard it is about 0.66g of CO₂, which can be about the amount produced that 4 trees absorb in a year! How much trees absorb is something I'll get to know better...

but yes in the end it is bad. But I heard it uses more sustainable types of cooling like air cooling for the servers, but we never really know. If you're a climate panic person like me (ive seen videos of people having no water pressure bc they live near ai sites), just try to use c.ai as little as possible and regulate how much you use.

My tip is; if you're sleepy, go to sleep! You can imagine your story continuously afterwards. When you rock that, just start imagining it in your head, as well the ai can't do everything you want like cool fighting scenes.

It's weird how they try to focus on AI for being harmful to the environment when we've already screwed over the ozone layer. All of a sudden they care.

You should ask these Tiktokers to cite their sources.

Electricity, social media sites, steaming services, sending text messages, cars, farming, pesticides, and almost everything in our modern world is bad for the environment to some degree. Just use it sparingly if you are going to use it.

Ps streaming services are worse for the environment than AI.

You're welcome.

u/Clean_Association_48 • 3 points • 2025-06-30 22:54 UTC

Thank you for actually putting a source 🙏

u/Invader_Bethany • 3 points • 2025-06-30 22:57 UTC

You're welcome.
