"the only moral pollution is my pollution" ahh anti-AI deology example #69420666

Posted by u/gutgusty • 0 points • 8 comments

Valid argument about the fossil fuel industry high using AI data center expansions to keep itself alive and profitable, onlr to be Immediately followed by an weirdly pro data center propaganda about efficiency?

Comments

You may need to attend to more reading classes. There is no way you got that from this post.

Also, what he said is true. AI is consuming so much energy even though data servers running AI may be the most efficient pc's on the planet. They are efficient as fuck when you look at TFlops per watt index. But that is not enough. AI softwares are fucking behemoths. They use all of the pc components(almost). Most SaaS softwares only uses CPU's. While AI SaaS'es uses both CPU and GPU. That is why it is ChatGPT and any AI SaaS is limiting prompts per day. They are really expensive and there are reports that USA needs to ramp up power production in order to keep up with China on AI. They are already planning to use more coal plants for that.

u/TawnyTeaTowel • 3 points • 2025-07-09 19:36 UTC

The anti AI idiots have probably collectively burned through more energy posting on Reddit, YouTube etc complaining about AI than OpenAI has used to train ChatGPT...

u/Superseaslug • 2 points • 2025-07-09 04:02 UTC

You can say ass on reddit

u/Solittlenames • 1 points • 2025-07-09 07:44 UTC

ahh is funnier u know, come on slug light ur goofy ahh up

u/Superseaslug • 1 points • 2025-07-09 07:48 UTC

No, thank you.

It's willful censorship to appease corporations

>Immediately followed by an weirdly pro data center propaganda about efficiency?

I mean, they are though? Data centers are not expensive because the hardware is inefficient- rather it's

because they have a huge amount of efficient hardware running in scales orders of magnitude larger than an average computer. If we talk super abstractly- a consumer card might do one operation with one watt of power, and you'll probably ask it for 100 operations- so you get billed for 100 watts. A datacenter GPU might do 5 operations with 1 watt, but in a datacenter you're asking it to do 10,000 operations. Now your datacenter takes 2000 watts.

(very very simplified in like 15 different ways, just to convey the gist)

Also- and this is admittedly a little pedantic, but datacenters have no incentive to run *propaganda.* They're a fully B2B business, they don't need public opinion to sway in any direction on them- though that might change as people in local councils start to oppose datacenter construction. Even so, the efficiency isn't relevant much more so than total strain on local resources.

u/Solittlenames • 1 points • 2025-07-09 07:46 UTC

I agree, however DCs do have an incentive to run propaganda, same as any business.

to keep things as agreeable as possible, it is necessary to convince clients that a DC is taking steps to reduce pollution and be pro environment. this is so that client companies can in turn look good on the environment, and so forth.

Do you not get the irony?

u/AutoModerator • 1 points • 2025-07-08 23:45 UTC
