

Why are people saying Ai dissolves water?

Posted by u/Cigar_1337 • 0 points • 81 comments

My friend has seen TikTok's of people claiming Ai dissolves water. I know how water works and theres no way it actually gets dissolved. Can someone enlighten me? I feel like this is a huge gaslight.

Dumb mental gymnastic non sense antis pull out to justify ad much hate as possible. Everyone who know the cycle of water know the whole "ai destroy water!" is bs

u/Fungous_Effluvium • 1 points • 2025-07-10 22:07 UTC

The best argument they might have is that AI data centers *sequester* the water. They don't even *evaporate* it in doing so, which is what I assume is meant by "dissolving" it.

Arguing with people who don't even know what the words they're using mean is tantamount to screaming at a wall though, so have fun with that...

Apparently they stopped teaching they water cycle in middle schools.

Some server farms work on evaporative cooling, that does evaporate water.

I use AI locally, and it is vastly more efficient than doing everything manually. If you replace an hour of photoshop with a few minutes of diffusion, that's a 10 to 100X saving in energy used.

It's one of the reason AI assist has won and there is no going back

Dissolving water would be great because then we could use the hydrogen and oxygen to generate electricity to power the AI, and the reaction also produces water which we can dissolve with AI, perpetual energy !

AI is so bad that it breaks the laws of physics
