Neither of those have anything to do with the kind of generative AI that people complain about, and if anything this just proves that how generative AI is being handled is just distracting from and poisoning the well of unrelated useful machine learning projects.

No it's not :)

u/PastelZephyr • 1 points • 2025-07-12 11:39 UTC

This can be used inversely, which you will see for a few years. AI controlled services like this allow the class who owns the assets to set the minimum price collectively, similar to how the renting market is.

But, overall if this technology continues to proliferate, it has the possibility of becoming another equalizer and making things fairer and more sustainable for everyone.

OK so we're just lying now. That's fun.
