

Don't you know? AI is bad for the environment

Posted by u/Witty-Designer7316 • 0 points • 37 comments

"Broken tablets? Used up paints? Art supplies? What do you mean?"

Comments

Glass bottles and wooden paint boards are bad for the environment?... is this the stance you want to take right now?

u/manny_the_mage • 2 points • 2025-07-12 23:46 UTC

but... doesn't increased AI use cause MORE artists to decide to throw away their materials?

like if people turn to AI over traditional artists, one could imagine that would result in a lot of artists quitting and throwing away their materials

u/Agnes_Knitt • 1 points • 2025-07-12 23:41 UTC

So I have to give up non-AI art then. 🥲

u/Detector_of_humans • 0 points • 2025-07-12 22:58 UTC

Oh god!!! a tablet that an artist and maybe more will use for 10+ years!!! The horror!!!!

u/GarglingScrotum • -1 points • 2025-07-12 21:02 UTC

LMFAO THIS IS SO DUMB I DON'T EVEN KNOW ANYMORE

u/soulmagic123 • 1 points • 2025-07-12 20:56 UTC

Here's the thing, I watched a pretty informative video with real life use cases and consequences here, and if you're serious you'll watch it too.

<https://www.youtube.com/watch?v=8enXRDIWguU>

This will be my counter point to things like;

Data centers don't use water.

This is my third time saying something on Reddit and every time there is a you with this level of push back to the point it feels like propaganda.

Lots of "deep research" proving I have no idea what I'm talking about.

An ai writer uses less water than a real writer?

I mean I've written a lot , I guess I drink more water when I writing compared to when I'm just existing. If so don't see the flaw in this argument, unless the net outcome of needing less human writers is will ultimately have less people.

The other big go to is how little water image generation and data. While ignoring the fact that model generation is the big consumer.

You just did that exact thing there, that a chat reply doesn't use a lot of water because...

You're basically said "look over here, at this thing it's barely consuming water and that's my proof" But also you're saying "but don't look over there where most of the water is being consumed because that won't work for my argument".

So I find what you are saying to be insincere at best and you've obviously put a lot of time into this but this how I would argue if the truth was inconvenient.

And the second big go to "other industries" (mainly food and paper use a lot of water) also use a lot of water.

And with a straight face the argument seems to be that food and ai are the same thing.

It's very clear that we have a water problem the it's only going to get worse. I'm all for every industry investing in salinization treatment, but what industry is getting all the investment money right now?

What industry has trillions of dollars pouring into it more than any other?

Nothing I am saying is competing with "we all can do better" at the same time we don't have extra water for new things to just use up and it really is that simple.

So watch that interview and tell me where it's flat out lying with evidence. Or don't.

Who is throwing away their pallets and pictures buddy, I think the AI is stupid.

u/sweetbunnyblood • 1 points • 2025-07-12 20:01 UTC

fast fashion? lighting? fossil fuel to transport goods? food waste from catering? paper from trees? crystal mining?

u/zooper2312 • 1 points • 2025-07-12 19:54 UTC

This may be a troll or a joke, but by nature humans and animals are creative, in that they create new things for themselves from what they find already there: shelter, food, space to play, etc. The thing that differentiates the two is animals creation is limited so it is sustainable, human is unsustainable so it looks like destruction.

Any discussion us creation has to come with a discussion of destruction and renewal. Yet, in discussion we divorce the two, scold ourselves for waste and continue consuming in parasitic ways, kicking the can down for little Johnny 5 Als of the future to solve.
