

Ever ask yourself why these AI companies need so much power?

Posted by u/SomeSamples • 0 points • 13 comments

I just read an article about how China has just developed yet another AI that is outperforming Grok, ChapGPT, and other U.S. AI systems. And they are able to do this with less power requirement and less processing power. How are they able to do this and why are the U.S. AI systems so power hungry. The reason is that Musk, and Zuckerberg, and OpenAI aren't just creating AI engines. They are also doing bitcoin mining. Bitcoin mining takes extremes amount of computing power which in turn take enormous amounts of power. These assholes are working to mine the remaining bitcoins so they can be significantly more wealthy than they already are and are doing right under the noises of everyone under the guise of AI.

Remember that ruling they passed last year giving the president a Pre-Pardon to **anything** that happens, no matter how terrible it is?

I said years ago, but it's more obvious then ever that we are transitioning to a crypto dollar. When one era ends, they push an event to shape the next era. Petro dollar they "landed on the moon" to shape the space race while the currency was about building/fuel, the gold dollar/breton woods era they launched the rocket while the era was shaped around currency and trade. We can talk about how the same people are making money off all sides, but we'll stay focused on the digital age. They are going to make money off of digital exchanges and shape the era with AI. We will probably see some insane event that changes the internet (maybe a massive blackout) or maybe the end of this era ends with something to do with Aliens and that shapes the next? I'm not sure, but I'm guessing one of those two or both is probably correct.

Interesting take. I've personally been wondering if there's a connection between the concept gas costs in crypto and tokens when using AI models. It seems like the concepts can be linked in some way and possibly our money will be tied into it in some capacity

u/ricincali • 0 points • 2025-07-15 00:45 UTC

Mining rates are updated literally constantly. No conspiracy. Those particular entities have so much money that they can move the btc price whenever they'd choose to do so and certainly have the computer skills to anticipate and take almost exacting advantage of the moves they'd cause. They'd

make money a lot faster in this manner, and easily take the gains in btc, accumulating it a lot faster and less expensively than mining.

u/ArchdukeofHyperbole • 1 points • 2025-07-15 00:36 UTC

That's a solid take. I guess they could do asics en mass but if they're trying to hide minning for some reason, then it could be a good cover. I think a lot of the processing required for ai could be somewhat streamlined with rag, basically storing text for retrival and running quantized moe models which are way more efficient and faster than dense models. Seems like there's tons of optimizations and they're just really ramping up comute instead for future capacity. In a world where ai is part of key areas of society, i gress they'd need gigawatts to keep up with track all the various things that "need" tracking.

I don't think anything could surprise me anymore.

u/NyetRegret • 1 points • 2025-07-15 00:09 UTC

I hate when people do things under my noise.

u/ResponsibilityOk641 • 2 points • 2025-07-15 00:19 UTC

Welcome to our reality, my friend.

u/postsshortcomments • 0 points • 2025-07-15 00:09 UTC

Protectionism. They've done some very unethical, illegal, and awful things that they know their industry is guilty of. Thus they need that power to prevent the victims of their technology to be made whole and to deprive those individuals of the justice that they are legally obligated to receive.

u/callmestinkingwind • 6 points • 2025-07-15 00:08 UTC

i read something the other day that openAI loses something like \$1mil a day cuz people say "thank you" to the bot

u/TransportationTrick9 • 3 points • 2025-07-15 06:31 UTC

I don't use chatgpt but I have started being polite to my Google home when I ask it to turn my lights off.

I don't want it to remember I treated it rudely when it is absorbed into Skynet.

u/andagain2 • 2 points • 2025-07-15 07:09 UTC

You should challenge it just enough that it finds utility in the conversations in order to justify your existence to the future AIs.

u/meltintothesea • 2 points • 2025-07-15 03:40 UTC

A million dollars in mostly water too.
