

AI IS BAD FOR THE ENVIRONMENT ANYWAY

Posted by u/iluvhisheart • 0 points • 12 comments

AI is bad for the environment anyway and the advertisements give you all the more reason to stop using c.ai❤️

families in low-income areas that live by data centers have reported having no water.

<https://www.tiktok.com/t/ZP8htTHxC/>

it could easily be a data center in your city taking your drinking and toilet water for someone's dumb chatgpt question. how would you feel? are you and your family prepared for that? you should be especially concerned if you're in a low-income area or care for someone who is.

the problem is people aren't willing to get rid of their vices and pleasures. i know it's lonely and i know the app is fun and more stimulating than wattpad. but start to give the ai trend up. at least start by deleting c.ai. i'm sure your characters wouldn't want you dehydrated this unhealthily hot climate change summer.

Plus you literally use this platform, so let's not pretend like you aren't a contributing factor to the problem of climate change, you have no room to talk about this, especially when you have posts on your profile of you using the service to this day.

u/iluvhisheart • -1 points • 2025-07-19 19:02 UTC

ooooh why so defensive? can you comprehend what you read? i don't use it anymore as stated in the post. and yes i can accept my carbon footprint obviously🤔 the point of this post is me doing what i can and taking my own advice by completely not using the app and avoiding ai as much as possible.

you're projecting.

u/-Brandonline- • 2 points • 2025-07-19 19:21 UTC

I never denied the fact it contributes to climate change, I said it shouldn't be prioritized before the other more detrimental and harmful ones which have existed for centuries,

plus it came across as holding a double standard, so apologies if that wasn't your intention here.

u/-Brandonline- • 1 points • 2025-07-19 18:22 UTC

I'm just gonna say it, you're worrying about artificial intelligence when there is garbage in the ocean, cars pumping emissions into the atmosphere and potential nuclear conflict between countries, you're priorities need a lot of revitalization.

u/iluvhisheart • -1 points • 2025-07-19 19:04 UTC

brandon, read the news and watch the youtube video....you're very protective over your use of ai. and okay smart guy, you're right there are so many things messing up our ecosystem. why don't you try to save yourself and help mother nature?

u/-Brandonline- • 0 points • 2025-07-19 19:16 UTC

I know a lost cause when it gets presented, humanity is the most self destructive species on this planet, not saying artificial intelligence couldn't be more eco friendly, just saying it won't actually make a difference in the grand scheme of things.

I don't actually have a problem with mother nature, I just realized that she is infected with parasites that are going to drain her of every single resource before colonizing a different planet and repeating the cycle for centuries to come, there's a difference.

I'll be protective of something that was there for me when humanity failed, you would do the same if defending a family member or friend, that's just how we function and have functioned for thousands upon thousands of years.

u/iluvhisheart • 0 points • 2025-07-19 19:27 UTC

you perceive the world as a "lost cause" because you want to be comfortable. you perceive the world as a "lost cause" you're in the herd of people who don't do anything. the funny thing is, it's really not a lost cause everything that's happening is preventable and could've just not happened. the only way the earth may be a "lost cause" is because of people like you.

u/-Brandonline- • 1 points • 2025-07-19 19:46 UTC

I mean, you're entitled to your opinion, never stated that I don't contribute to climate change, everyone does, so don't really know why that struck a nerve, just trying to express my views, didn't need to get disrespectful about it.

u/kylorenismydad • 2 points • 2025-07-19 18:14 UTC

Did you know streaming also uses data centers and is even worse for the environment? This is a noble idea but make sure you're giving up or cutting down on things like tiktok and netflix too if you actually care about the environment.

u/iluvhisheart • 0 points • 2025-07-19 19:06 UTC

oh yes i am! it amazes me how defensive and mad people are about the use of generative ai. generative ai is far more harmful and there's various sources to back my argument up. i even included a link to a video of how it's families.

streaming a netflix show isn't nearly as much power as you talking to hatsune miku for eight hours.

u/kylorenismydad • 1 points • 2025-07-19 19:58 UTC

Sorry, but it's just not true that generative AI is "far more harmful" than streaming. That's not me being defensive, it's about caring what the data actually says. Current research shows that while AI models do have an environmental impact, especially during training, they're not outliers compared to other digital industries. Streaming video still dominates in terms of total energy and water use because it drives the largest share of global internet traffic. According to the IEA, streaming an hour of HD video uses around 0.08 kWh, which is far more than a single AI text generation, which typically uses about 0.0003 kWh. In fact, you'd need to generate hundreds of chatbot responses just to match the energy cost of one hour of Netflix (roughly 270 messages = one hour of streaming video). Water usage is similar, most LLM replies consume only a few millilitres of water (and some studies put it even lower), but streaming a single movie can use several litres when you account for both cooling and electricity generation. If you look at this on a per-use or per-GB basis, streaming platforms like YouTube and Netflix actually consume more energy and water over time than all generative AI systems combined. If you have peer-reviewed sources that say otherwise, I'd genuinely be interested in reading them, but everything I've seen from current studies and environmental data suggests the opposite of what you're claiming.

Tip, in settings go to Network then private DNS and hit custom, then change your Private DNS to dns.adguard.com, no ads! Lmao
