

I am so sick of the hysteria regarding AI and the Environment.

Posted by u/VariousDude • • 0 points • 5 comments

The most obnoxious thing lately has been the constant badgering of misinformation regarding AI's impact on the environment. We all know the Water usage argument that is often inflated or misquoted but what none of them seem to know about is how AI is being used to help the Environment.

It may come as a shock to Anti-AI types but a tool used for speed and efficiency can be used for...well...speed and efficiency regarding a host of things.

I know most Antis are obsessed with Art, as if it's the only thing that AI is being used for. But the often repeated lie about AI's impact on the environment is infuriating because it is fully of confirmation bias, improperly sourced data, speculation, hysteria, or just general misinformation.

A basic search on Brave yields tons of articles and summaries of articles that show how AI is being used to help reduce Carbon Emissions, prevent forest fires, flood planning, designing better equipment for renewable energy, waste management, etc.

TL;DR

AI is becoming an invaluable tool to help save the environment and is doing a damn good job at it.

If I may be a little harsh for a second.

AI is doing way more for the environment than your \$15 furry diaper inflation commissions.

Studies like this reinforce my point. AI is not just a risk factor, it is one of the only technologies capable of reducing emissions at a multi-billion-ton scale. If governed well, it can make our infrastructure and supply chains far more sustainable over time. It's our best path forward given the trajectory of destruction without ai.

I find the environmental impact thing to be so stupid. Like one single burger use approximately the same amount of water as 100000 chatgpt prompts.

u/fireaza • 4 points • 2025-07-24 12:59 UTC

They don't actually care. "Concern for the environmental impact" is nothing more than convent subterfuge for the real reasons they don't like A.I, which tend to be emotion-based. They know this will always be a weaker position to argue from, so they need something better.

Carbon emissions are always always misleading to benefit whomever's citing the figure

Technically AI produces 0 emissions if the electricity used is from clean energy sources.

u/VariousDude • 8 points • 2025-07-24 00:11 UTC

I know. What my point was is that AI is being used by experts to reduce Carbon Emissions from other sources.

u/Monochrome21 • 4 points • 2025-07-24 00:13 UTC

The whole figure is basically worthless tbh

The whole thing is just to shift blame away from energy companies who actually have power over this kind of thing to people for using energy.
