

Why do AI bros deny that GenAI is bad for the environment?

Posted by u/Nearby-Lime-5799 • 0 points • 95 comments

Every time someone gives hardcore evidence that it's bad they immediately say it isn't, without any evidence. Are they allergic to googling something. And as a bonus question why do they love generating CSAM so much?

Greed, narcissism and hypocrisy.

u/rndoppl • 1 points • 2025-08-23 16:03 UTC

because the rich always deny that their wealth accumulation had anything to do with negative environmental impacts.

the number one thing the rich do is lie. it is rare for a rich person to be fully honest. The More You Know 🤔

Many rich people are propagandists first and foremost. they get in early on technologies that are rife with problems and don't fully deliver and actually end up contributing a lot of harm to a significant percentage of people. but they sure as heck won't tell you.

here is my take on AI. can it be used for good? of course. it will lead to new drugs, new material sciences, new logistics solutions, better robots, etc. but what will it be used for primarily? you got! increased price gouging tailored to each online shopper. every price you see online will be unique to you. there will also come a time where every place you go, the sales associate will know exactly what to charge you. they'll have AI data on you at checkout. you will either receive discounts or not based on your unique financial situation.

the ultra wealthy aren't satisfied going after just the poor and middle class through low wages. they are gearing up for a future where the upper middle class are the next targets. if you have money, they are going to ensure you pay whatever they think you're able to. AI will use face recognition, location data, ISP addresses, internet shopping traffic data etc, to formulate unique prices tailored just for you. if you live in a nice house, drive a nice car, work at a certain place, travel to certain places, have certain credit cards, have accounts at certain financial institutions, you guessed it, you will pay more for products and services.

the future is AI developing unique prices for you! if you have money, get ready to spend a lot more of it. there is one goal in silicon valley: billionaires must become trillionaires.

AI could be leveraged to reduce consumption, if we used it as labor saving tech rather than productivity multipliers. However, because we exist in capitalism, we always strive for more profit with scientific gains, rather than less expensive from scientific gains.

The technology itself is inherently more efficient than human labor. Supporting 20+ humans living 24/7 vs running one future AI agent 24/7 is a no brainer in terms of environmental impact. But we're not foreseeably culling the human population in favor of AI automation, obv.

It's just that our demand is ever higher, and end up having both AI and humans, which does increase the overall consumption. However, when we consider it in terms of alternative marginal production cost, it is very good for the environment. For instance, to produce one extra AAA good movie each year traditionally might have a large environmental impact because we need to have 100+ extra humans on earth and working in that industry, but if genAI can do it on a couple of tensor cores, that cost of one additional movie per year is marginal to the environment compared to 100+ humans.

Capitalism will always seek growth, so that extra movie per year will always be pushed for by the system, and AI doing it is actually a much lower alternative marginal cost. If the human race seeks a cosmic destiny, it will someday before then consume far more information than it does now. If that information is produced by heavy human effort, you can imagine how much worse it would be for the environment due to supporting all those extra humans.

I think that's the one argument I don't really have a way to defend against.

u/art_regarder • 1 points • 2025-07-25 12:10 UTC

I think what's going on is that most AI-bros believe the environmental argument is a Trojan horse for AI hate rather than a good faith critique. As environmental issues are not unique to AI they easily dismiss it as unfair hate.

u/Able_Fall393 • 1 points • 2025-07-25 10:27 UTC

You realize Googling your anti-AI rants burns water and energy too, right? Same with Reddit, it runs on the same kind of data centers you're blaming.

Accusing people of supporting illegal activity because they like an LLM isn't just unhinged. It's slander. You're not here to save the planet. You're here to throw tantrums over tech you don't understand and fear.

u/Nearby-Lime-5799 • 1 points • 2025-07-25 10:49 UTC

Go make a piss filter comic, dick

u/No-Whole3083 • 1 points • 2025-07-25 09:26 UTC

Human existence is bad for the environment. So yeah, you are right. If you are not prepared to talk about scale then what is the point.

u/sleeptokenfan728 • 1 points • 2025-07-25 07:35 UTC

I hate to break it to you but we are inches away from the point of no return and none of the environmental hazards are being dealt with.

Cars should be illegal, but they aren't, because without cars you can't get to work to line the capitalist billionaire's pocket.

We're fucked, basically, so who cares.

u/Salindurthas • 1 points • 2025-07-25 04:58 UTC

Often they will look at the per-prompt environmental cost, which is usually very low. Like, it may well be the case that if I ask ChatGPT to write me an essay, then that might cost less electricity than me typing an essay myself.

But I think that overlooks:

- * the energy (and other resource) cost of training ai models
- * that some users make many many prompts, (like making a website of 12 new fake-news article a day, or attaching a gen-ai response most/all Google searches), so that the small cost adds up

u/dzaimons-dihh • 1 points • 2025-07-25 01:52 UTC

Personally, I feel that no change is going to be made on this part of GenAI until some legislation about its environmental damage is passed

u/EInuDev • 1 points • 2025-07-25 00:41 UTC

"water is a renewable resource !!"

u/MinecraftBoxGuy • 1 points • 2025-07-25 00:28 UTC

Where is your evidence that the general model is bad for the environment?
