

Unregulated AI ventures causing the current heatwave and water shortage issues in the US?

Posted by u/Castorias • 0 points • 1 comments

Noticed a headline about the water usage in San Antonio, Texas yesterday for just the Army Corps of Engineers and Microsoft's AI data centers being something in the 400+ gallon range over the last two years... That's just two applications, and not the most demanding either. Most of that water is turned into evaporate. Does anyone else think that mixed with the unregulated heat all these new AI focused data centers are putting off are contributing to heatwaves that we're seeing now, instead of 'corn sweat'?
