

Cheyenne to host massive AI data center using more electricity than all Wyoming homes combined

Posted by u/SwitchOnEaton • 0 points • 5 comments

I thought about cross posting one of the several Reddit posts about this story. Instead, I'm sharing the original story and then a link to this post: [Cheyenne to host massive AI data center using more electricity than all Wyoming homes combined : r/technology] (https://www.reddit.com/r/technology/comments/1mbykoo/cheyenne_to_host_massive_ai_data_center_using/) I think it's interesting to see the contrast between people heavily involved in the data center industry and then the public at large.

I decided to post this with the exact same headline the AP used, which is an interesting way to frame the story.

Anyway, I thought the sub here would be interested.

More people live in my ward than the entire state of Wyoming.

They should update the headline to reflect that. 🤔

u/Zgoos • 11 points • 2025-07-31 15:05 UTC

The silly thingy about the headline is the implicit assumption that "all Wyoming homes" is a lot of homes. People don't really understand just how few people live there. Rhode Island, the smallest state, has double the population.

Also that residences barely use power anyway. Commercial and industrial applications will always be the heavy user and data centers are one of those.

It would be a far less dramatic headline if you compared against places like smelting plants or other heavy industrial operations.

Perspective matters!
