

Is phone AI bad for the environment?

Posted by u/Strawbrryfair • 0 points • 1 comments

Okay, i dont know if this is the best subreddit for this but i don't really use Reddit so bear with me. I'm getting a new phone, the Motorola razr and it has quite a few AI features that I initially intend to try and disable once I get it. I'm not sure if that's entirely possible, but I'm not super interested in it because I don't want to fuck with AI. But I'm curious if I can't turn it off I'm not sure if the AI in the phone is the same or has the same effect on the environment as generative AI, I read something online that generative AI is the worst for the environment and that some AI doesn't really affect the environment, but I'm not sure if that's true because you know it's the Internet. so I was wondering if anyone who knows more than me about all of this. Let me know if it would be a bad idea to use it, like at all. I'm heavily against chatGPT, and I don't wanna use the AI on my phone if it's just as bad as that.

If it runs on your hardware locally then it's only as bad for the environment as charging your phone. Some brands opt for this option for privacy, should be relatively easy to check by disconnecting from the internet and seeing if the functions are disabled or lower quality
