

How would our brain compare with various models of AI if all our brain power was used for thinking.

Posted by u/Whyislife__likethis • • 0 points • 2 comments

Currently our brain has a magnitude of various functions we tend to just to stay alive. Hypothetically if we were to put 100% into pure thinking, how would we stand and / or what would that be like?

Our brains is thousands if not millions of times more advanced than AI. We can understand things, learn and figure out something we've never done or seen before.

AI has a crap ton of data, "memories", and will give you the answer it deems the most probable. It doesn't know whether that's right or wrong.

So if we stopped using our brain to keep ourselves alive it wouldn't make much of a difference I guess. We still don't have the same amount of knowledge to immediately give an answer to every random question

If to frame my question more accurately

I'm more so wondering, in terms of pure processing power (not the real element human brains have) and not from a moral standpoint

How would we stem?
