

my opinion on ai: it isn't inherently evil (apart from all the pollution and the fact that it doesn't credit sources in ai art), it's the way people use it to turn against each other and gain exterior validation without habing to do anything that's bad.

Posted by u/Wide_Bath_7660 • 0 points • 18 comments

I think the main problem with ai is the way people are using it. for example, I have seen wildlife photography groups where most of the people there post ai pictures instead of actual wildlife pictures. this is lying. it is the equivelent of posting a stock image of some deer on the group and saying you took it. in the same way, posting ai art and trying to pass it off as something you've created from scratch, when you've done the equivilent (augh how do you spell equivalent??) of typing in a google search, is wrong. posting and using ai art isn't necessarily bad as long as you do it ethically.

another thing I've seen a frightening amount of is people bullying artists off social media because their art looks ai, regardless of whether it is or not. even ai detectors can be fooled!

I use ai, but I use it to do things like recommending me books, or just messing about with it- stuff that isn't doing anyone any harm.

ALTHOUGH I am slightly biased against ai images as I have felt firsthand the impact it causes on artists, and how demeaning it can feel to have something you've spent hours on, and poured your heart into, compared to something which has taken a computer 5 seconds to generate. also, I don't get why you would type a stupidly long and specific prompt into an ai, when you can just type it into google and get exactly the same result.

The truth of the matter is "all inspiration come from God."

There is only one source when it comes to Art.

I don't have to give credit to any human being.

We've had this problem of crediting long before A.I.

And just because my Art sounds or looks like someone else's work, doesn't mean the work isn't an original work.

u/Due-Cod-7306 • 1 points • 2025-08-20 02:32 UTC

u/Wide_Bath_7660 • 0 points • 2025-08-17 15:21 UTC

You have to give credit to people whose art you have traced or copied exactly. Having an idea of your own isn't the same as copying someone else's idea.

There have been crediting issues before ai though- and it's so annoying! There have been a few book covers, art pieces and

posts where I have wondered who the artist is and not been able to find any credit, and both me and the artist miss out because of it!

u/OperationWooden • 1 points • 2025-08-17 15:23 UTC

No other inspiration but God.

u/Wide_Bath_7660 • 0 points • 2025-08-17 15:28 UTC

Please don't bring god into this. It is important to remember that not everyone believes in a divine being that somehow gives you every piece of inspiration you have ever had, even if it's second hand.

u/OperationWooden • 1 points • 2025-08-17 15:34 UTC

If you let unique ideas be the groundwork for credit, then I'm sorry, only people above and below 100 I.Q. will benefit.

This is a fact btw: People's work get flagged as A.I. generated wether it was or wasn't. This is not because it is A.I. generated but because they sit in the 100 I.Q. range most likely.

I sit at 133 I.Q. and I spit out plenty of unique ideas many have likely used in their creative process. You won't see me cry about people taking my ideas as their own.

I'm not as stupid as you think. And even being stupid isn't really a bad thing imo. We are all kind of stupid compared to God.

u/Wide_Bath_7660 • 1 points • 2025-08-17 18:26 UTC

I never said you're stupid. Part of my original post was saying that it is unjust that people are being bullied about ai use even when they aren't using ai. Ai doesn't take people's ideas, People put their ideas into ai and it spits out art. The difference between ai art and art is people who make art have practiced for years and spent hours on it, people who make ai art have spent 10 seconds typing in a prompt. That is the difference.

u/OperationWooden • 1 points • 2025-08-17 18:32 UTC

You don't have to call someone stupid to know you're being treated as such.

And so what if A.I. does take people's ideas?

Welcome to the club. Stop crying over it.

People who practiced for years and years treat their craft like the easiest thing to do.

Of course you'd find people who use A.I. as something easy.

You likely haven't even used A.I. yourself to even understand that it's not as easy as you say it.

And since you think all A.I. art is slop, even if you did try it out, you won't be able to tell good A.I. art from bad ones. You'll just go "Oh look, see I generated this with a few words, A.I. art is too easy."

Btw, I'm aware that most people with capabilities don't even believe in

themselves, so if you're one of those people, good luck trying to convince me that A.I. Art didn't take you an accumulated skillset.

I have done plenty of ai art in the past, and I know exactly how much effort it takes. I think you are starting to get mean now, so I am going to leave this thread. Please remember that there is an actual person on the other end of this, and treat them with respect.

u/TrapFestival • 5 points • 2025-08-17 13:04 UTC

"all the pollution"

Okay, now note that relative to every-fuckin'-thing-else instead of in a vacuu,

And I am biased toward image generation because [I hate drawing.]

u/Wide_Bath_7660 • 0 points • 2025-08-17 13:11 UTC

for soecific characters, I use picrew- It is much more fun and ethical, and I feel like I actually made something!

u/TrapFestival • 2 points • 2025-08-17 13:22 UTC

It's a matter of if the output justifies the cost. In my case, picture generation doesn't cost any more than it would to play computer games on high settings, and I have no control over model production or anything like that. Plus, outside of the field of picture generation I think using AI for medicine and the like could very easily justify itself.

It's gonna be there tomorrow whether I use it or not, so why shouldn't I?

u/Wide_Bath_7660 • 0 points • 2025-08-17 13:43 UTC

I'm not entirely sure what you mean, but that last sentence is actually quite interesting. ai is becoming something that is forced onto everything, whether people like it or not. for example, whatsapp using ai to analyse your entire chat history and provide an overview of what has been said. I can't open whatsapp now without it being an annoying little blip in the corner. I have read many ai generated messages at the top of my browser thinking they were actual web pages, before realising that half the information contradicts itself.

u/TrapFestival • 1 points • 2025-08-17 13:54 UTC

The first part was about the environment in particular.

u/Tyler_Zoro • 2 points • 2025-08-17 13:04 UTC

> I think the main problem with ai is the way people are using it. for example, I have seen wildlife photography groups where most of the people there post ai pictures instead of actual wildlife pictures. this is lying. it is the equivalent of posting a stock image of some deer on the group and saying you took it.

Yeah, but people do that. It's not really an AI problem any more than it was a stock photo problem. Don't blame the image that someone grabbed from a stock photo service, blame the idiot who claimed it was a deer outside their door.

> when you've done the equivalent (augh how do you spell equivalent??)

Does no one use a spell checker anymore? I mean, in my browser it's a default feature...

> another thing I've seen a frightening amount of is people bullying artists off social media because their art looks ai

Yeah, the anti-AI hate crusade is kind of horrific. But this isn't AI's problem. It's a very human problem.

> how demeaning it can feel to have something you've spent hours on, and poured your heart into, compared to something which has taken a computer 5 seconds to generate

Imagine how elevating it would feel to use a sophisticated tool like an AI model to supplement your artistic skill. This is what I do, and I can tell you first-hand that it's a real game-changer.

u/Due-Cod-7306 • 0 points • 2025-08-20 02:33 UTC

"Sophisticated" 😏 😏

u/Wide_Bath_7660 • 2 points • 2025-08-17 13:09 UTC

YES! that is the whole point of the post! it is human's problem- ai is just doing what we tell it to!

I don't have a spell checker on reddit for some reason and it is driving me crazy! I never realised how much I misspell words automatically because I'm used to having it correct for me...

about the last point you made- the ai version looked worse though!

u/Tyler_Zoro • 3 points • 2025-08-17 13:45 UTC

> the ai version looked worse though!

Keep learning! AI tools take time to adapt to, and in a sort of funny way it can take a long time to figure out how to NOT use them.

For example, my AI art improved tremendously when I started basing it all on my own photography as inputs, and reducing the amount of contribution the AI had to the result.

Refik Anadol mostly spends his time ripping the guts out of AIs and exploring how they work visually. That's another perfectly valid approach.

[These folks](<https://vimeo.com/1062934927>) mostly just did normal animation, but found several different ways to leverage AI image generation to smooth the process. That's another valid approach.

If AI is going to be useful to your craft, you need to find your own way, and that might have lots of false starts.

u/Wide_Bath_7660 • 1 points • 2025-08-17 13:48 UTC

I understand your point, and AI can be a good tool for creating images, but if the drawing looks fine, I don't think you should feel the need to enhance it with ai.

u/Tyler_Zoro • 2 points • 2025-08-17 14:00 UTC

You could make that statement with respect to ANY technology, from paint brushes to 3D modeling software. I remember people making this exact same claim when Akira came out, due to its use of computer modeling to create the 3D wireframes over which the cityscapes were drawn.

And here we are, going through it all again...
