AI development horrifically bad for environment?

Posted by u/Friendly-Youth2205 • 0 points • 1 comments

Is it true that the damage to the environment of creating chtgbt-5 is the same as burning 7 million car tyres? Not energy just straight CO2 into our air.

Don't get me wrong I don't have an answer, just curious if we all.mnow this are are happy to proceed.

This is about water use for inference, and OP asked about CO2 emissions for training. This image just isn't relevant.

Is the amount of misinformation on how AI works relevant?

u/UsefulUnderling • 2 points • 2025-08-20 20:17 UTC

It's not great, but it's not a big impact. The carbon footprint from training an LLM is the same as flying a few hundred jets across the Atlantic.

It would also be easy to force data centers to use only renewable energy, but that isn't happening in the USA any time soon.
