

Can AI reuse "precomputed answers" to help solve the energy consumption issue since so many questions are the same or very close?

Posted by u/SkyExpert1359 • 0 points • 7 comments

Like, search engines often give results super fast because they've already preprocessed and stored a lot of possible answers. Since people keep asking AIs the same or very similar things, could an AI also save time and energy by reusing precomputed responses instead of generating everything from scratch each time?

That's called pattern matching

u/ziplock9000 • 1 points • 2025-08-22 11:18 UTC

A cache, sure if nothing about the AI has changed since the last query that would alter it's answer.

Personally speaking, I'm always asking it the same thing all the time. I just can't be bothered to look it up in an old chat

u/Backyard_Intra • 2 points • 2025-08-21 22:58 UTC

It already does. Extensively. Both internally (storing vectors) and externally (responses).

u/eugisemo • 2 points • 2025-08-21 22:55 UTC

in a way, when the LLMs make stuff up, that's a cost optimization technique. For example, you give it some long pdf and ask questions about it, and it tries to say generic stuff that didn't really analyze the text. Saying "Oh, this is some thought-provoking content which taps into the essence of reality" is kind of a precomputed answer.
