Consumerism's Environmental Impacts (Part 1: How Data Centers in Cloud Technology and AI impact communities and ecosystems)

Hi y'all :-) I hope everyone is having a nice time here on Earth. Today I wanted to open up a discussion and exchange of information in order to raise awareness of this matter.

 Data Centers are being built in areas that struggle with having sustainable water resources, and these data centers like to drain gallons. Every AI query or bit of data in your computer/phone takes water from these places in order to cool the servers of the data center. I'd encourage you all to look into the amount of water via a link I will paste in the comments. However, the main link I will have pasted is an article that goes over the data centers impact on the globe. Water isn't the only problem however, as the costs to build and operate these data centers have an impact on low-income communities.

Thank you for your time, patience and effort :-) I wish everybody a wonderful week/weekend!
