

AI energy use is becoming a grid problem not a chip problem

Posted by u/brainlatch42 • 0 points • 1 comments

AI isn't just a chip problem anymore, it's turning into a grid problem. Data centers are asking for huge amounts of power, and in some places the wait for new grid connections is longer than the time it takes to train and deploy new models. Smaller chips and clever coding can save some energy, but the bigger issue is how fast power lines and substations can actually be built. A rough look at "joules per token" shows how quickly the numbers add up.
