If we are going to have to live with these things, can they at least help the economy, and public?

Then ai bro's piss can match what it produces... Crappy thing goes in, Crappy thing comes out.

Even if they're using waste water they're still keeping it from natural circulation. Typically that waste water would be making it's way back into the ecosystem and filtering naturally. They mention it going down river, that's when infiltration into surrounding soil is supposed to happen. Water making it to the ocean where evaporation happens is what brings the rain.

People make similar arguments about closed loop systems recycling the same water, but water currently in use can't circulate through the ecosystem how it needs to. If you have 10,000 gallons of water that you're super efficient with making sure to reuse every drop constantly, you're still sectioning off 10,000 gallons of water and preventing access to it from other things that need it.

Anything that takes water out of the cycle we all learned about in 3rd grade isn't contributing properly to the ecosystem.
